Developments In Natural Intelligence Research

IBM Research has been exploring artificial intelligence and machine learning technologies and techniques for decades. We believe AI will transform the world in dramatic ways in the coming years – and we're advancing the field through our portfolio of research focused on three areas: towards human-level intelligence, platform for business, and hardware and the physics of AI.

Timeline of artificial intelligence - Wikipedia

In some cases, when a task requires intelligence, artificial systems can do the job. Artificial speech recognition as well as face- and handwriting-recognition software rely on techniques that emerged from AI research. Other everyday applications of AI include household floor-cleaning robots and artificial characters in video games that change their skill level to adjust to a user's abilities.

Artificial intelligence and machine learning in financial ...

In computer science, artificial intelligence (AI), sometimes called machine intelligence, is intelligence demonstrated by machines, in contrast to the natural intelligence displayed by humans and animals. Colloquially, the term "artificial intelligence" is used to describe machines that mimic "cognitive" functions that humans associate with other human minds, such as "learning" and "problem ...

22 May 2019 Paris Masterclass Overview The global market for natural & organic cosmetics continues to strengthen. Healthy growth rates are continuing, however there are questions about future developments. This new masterclass looks at the future direction of natural & organic products in the cosmetics industry. What do consumers look for in natural & organic products?

Natural Cosmetics Masterclass: Future Directions

Artificial intelligence is already transforming the world of work, but the future is hard to predict. Some see most jobs at risk of automatisisation, while others argue robots will only take on a narrow range of tasks in the coming decades. Nevertheless, we need a broad debate to prepare the appropriate economic policy response to the new industrial revolution.
